Europe bets on the single charger for devices

From the end of 2024

Madrid, 04.10.2022, 20:21 Time

USPA NEWS - By the end of 2024, all mobile phones, tablets and cameras sold in the EU will have to be equipped with a USB Type-C charging port. From spring 2026, the obligation will extend to laptops. The new law, adopted by plenary of the European Parliament on Tuesday with 602 votes in favour, 13 against and 8 abstentions, is part of a broader EU effort to reduce e-waste and to empower consumers to make more sustainable choices.

Under the new rules, consumers will no longer need a different charger every time they purchase a new device, as they will be able to use one single charger for a whole range of small and medium-sized portable electronic devices. Regardless of their manufacturer, all new mobile phones, tablets, digital cameras, headphones and headsets, handheld videogame consoles and portable speakers, ereaders, keyboards, mice, portable navigation systems, earbuds and laptops that are rechargeable via a wired cable, operating with a power delivery of up to 100 Watts, will have to be equipped with a USB Type-C port. All devices that support fast charging will now have the same charging speed, allowing users to charge their devices at the same speed with any compatible charger.

As wireless charging becomes more prevalent, the European Commission will have to harmonise interoperability requirements by the end of 2024, to avoid having a negative impact on consumers and the environment. This will also get rid of the so-called technological "lock-in" effect, whereby a consumer becomes dependent on a single manufacturer.

Better information for consumers

Dedicated labels will inform consumers about the charging characteristics of new devices, making it easier for them to see whether their existing chargers are compatible. Buyers will also be able to make an informed choice about whether or not to purchase a new charging device with a new product. These new obligations will lead to more re-use of chargers and will help consumers save up to 250 million euro a year on unnecessary charger purchases. Disposed of and unused chargers account for about 11 000 tonnes of e-waste annually in the EU.

Parliament's rapporteur Alex Agius Saliba (S&D, MT) said: "The common charger will finally become a reality in Europe. We have waited more than ten years for these rules, but we can finally leave the current plethora of chargers in the past. This future-proof law allows for the development of innovative charging solutions in the future, and it will benefit everyone - from frustrated consumers to our vulnerable environment. These are difficult times for politics, but we have shown that the EU has not run out of ideas or solutions to improve the lives of millions in Europe and inspire other parts of the world to follow suit."
