UN report calls for a greater place for science in international decision-making

Presented to Ban Ki Moon by Irina Bokova

Paris, Washington DC, 15.09.2016, 18:07 Time

USPA NEWS - In fact, all nations must invest more in science technology and innovation (STI), argues The Future of Scientific Advice to the United Nations, A Summary Report to the Secretary-General of the United Nations from the Scientific Advisory Board, which will be presented to Ban Ki-moon by Irina Bokova

"STI can be a game changer in dealing with nearly all the most pressing global challenges, "? claim the experts of the Scientific Advisory Board arguing that STI also have a key role to play in accomplishing the 2030 Sustainable Development Goals of the United Nations. As an example, the report notes that scientists and engineers improved the efficiency of solar panels and wind turbines faster than had been expected, raising the hope that we will be able to reduce our dependency on fossile fuels. Yet, only 12 countries* dedicate more than 2.5% of their Gross Domestic Product (GDP) to research and development (R&D). This is far from enough considering what is at stake, say the authors of the report. They call on all countries, including the poorest, to invest at least 1% of their GDP on research and urge the most advanced countries to spend at least 3% of GDP on R&D. This effort must also focus on reinforcing science education, notably in developing countries, and on improving girls' access to science courses.Director-General Irina Bokova in a message published in the report says, "It is a powerful resource for the Secretary-General and the UN System as a whole, so as to reinforce its role as an interlocutor of world leaders and as a central actor in defining solutions to global problems and the way these manifest themselves at multiple levels. from global

The Scientific Advisory Board of the United Nations Secretary-General was established in 2014 to formulate recommendations in the sciences, technology and innovation (STI) that will enlighten the work and decisions of the United Nations. The Board numbers 26 scientists of world renown appointed to take stock of scientific needs to tackle global challenges. UNESCO serves as the secretariat of the Board which produces documents on subjects such as the data revolution, the role of the sciences in meeting sustainable development goals or the Delphi Study, which identifies major scientific concerns for the future of the planet.
