# The 28th Meeting of the Parties to the Montreal Protocol held in Kigali

#### Remarks of US secretary Kerry

Paris, Washington DC, 16.10.2016, 21:29 Time

**USPA NEWS -** Remarks at the Plenary of 28th Meeting of the Parties to the Montreal Protocol: Last month I announced in New York that in order to help with the early stages of an ambitious HFC amendment, the United States and other donor countries intended to contribute an additional \$27 million now, Kerry Said.

Well, here it's the same thing. We have countries coming in that are prepared to start in 2021. We are and we will, but we know we can't hold everybody to that. So other countries will start at a later time with a different baseline, and other countries perhaps even different from that. We understand that. That's why we have a group 1 and a group 2, and we're working through these things. But no country has a right to turn its back on this effort and to forget about the meaning of a multilateral effort where the world is looking to us to try to literally save this planet from what we ourselves have chosen to do with respect to how we power our energy and what we have done for more than 150 years or more.

I came to Kigali for the same reason that I came to Vienna last July: because I don't want anybody to have the least doubt whatsoever about the commitment of the United States to try to make this happen, to invest in these negotiations and to invest in the outcomes, to continue to lead in order to help put technical assistance, resources, money, and intellectual property, and all of the effort that we can to help countries be able to cross this line. We are willing to work with all of you to make possible a meaningful outcome. And I want to emphasize: That meaningful outcome is not some pie-in-the-sky dream out there that's yet to be defined. It's not some intangible, yet to be defined technology or something that we don't know how to do. It's not.-

And I'll tell you what "" it's 2016, right? The first baselines don't even begin until 2019, 2020, 2021. Then you go to "24, "23, "24,

"25, "26 and some out into later "" 10 years in this world of technology is a lifetime, many lifetimes. And the fact is that if we continue to remember the high stakes for every country on Earth, the global transition to a clean energy economy is going to accelerate. It is going to drive a virtuous cycle of greater innovation, greater investment, greater productivity, cheaper products, faster compliance with all of what we're trying to do". US secretary Kerry said. Source US Department of State. To be continued in next article
